Century MP Access High Efficiency Traction Chargers MP Access 80V 80A CG5116

MP Access chargers are an economical range of chargers offered by Century which incorporate specialised charging algorithms suitable for all lead acid batteries in traction applications. With high efficiency power conversion technology and wide input voltage range, these chargers are ideally suited for Australian conditions.

Designed to recharge valve regulated (sealed) and vented (flooded) lead acid batteries in a variety of Voltages and Ah capacities. Integrated with an industrial microprocessor using Century's specified algorithms, These changes have the benefit of delivering a fully charged battery quicker and capture data on charging time and charging performance.

The use of high frequency power conversion can reduce the amount of input energy consumed for charging, with a high level of control of the power applied to the battery.

Using advanced technology means that the chargers are lighter weight to conventional thyristor controlled chargers; giving operators the choice of wall mounting these chargers to prevent the risk of damage from impact from other equipment as well as increasing floor space utilisation.

Features and Benefits

- Alarm indicators: Charger indicates to the operator issues with the charging condition and logs issues with its memory.
- Compliant to relevant Australian Standards: Century ensures full compliance with all relevant standards applicable to traction chargers.
- Industry leading charging algorithms: Century specified charging algorithms improve charging time and reduce physical wear on the battery, such as increase water consumption.
- High frequency power conversion: With >90% efficiency power conversion from input power to output power, reduces the amount of power consumed to recharge batteries relative to SCR technologies.

Century MPAccess

MP Access 80V 80A CG5116

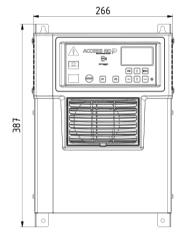

ELECTRICAL INPUT SPECIFICATIONS			
VAC Input	3P 400Vac ±10%		
Input Current (Max I)	12.4A (@400VAC)		
Input Frequency	47-63Hz		
Power Socket Required	56C420		
Power Factor	0.95 at rated power		
Efficiency	93.5% at rated power		

ELECTRICAL OUTPUT SPECIFICATIONS			
Technology	High Frequency Conversion(Soft Start)		
Nominal VDC (Programmable)	80VDC (24VDC; 36VDC; 48VDC; 72VDC)		
VDC Output Range	0.9 to 2.8VDC per cell		
Output Power (kW)	7.7kW (2.4VPC @400VAC)		
Max Output Current (A)	80A		
Output Ripple	<5% RMS of Nominal DC Voltage &		
	<10% RMS ripple current at 100% load		
Output Accuracy Setting	VDC output $\pm 0.5\%$ / Current output $\pm 2\%$		

ENVIRONMENTAL SPECIFICATIONS		
Environmental Protection	Conformal coating	
Operational Temperature (Ambient)	0 - 40 °C	
Storage Temperature	-25 - 60 °C	
Humidity	RH <95% Non-condensing	
Cooling	Fan cooled	
IP Rating	IP20	

STANDARDS		
Emissions	EN61000-6-3	
Immunity	EN61000-6-2	
Safety	EN60335-1 & EN60335-2-29	

MECHANICAL		
Weight (kgs)	9	
Height (mm)	387	
Width (mm)	266	
Depth (mm)	152	

An affiliated business of the GS Yuasa Corporation, Century Yuasa has over 80-years of supplying a range of stored energy solutions to the Australian market. An established network of sales and distribution offices throughout Australia and New Zealand has seen the business gain the trust and respect from its customers by focusing on quality products and exceptional customer service. The portfolio within Century Yuasa includes a wide range of stored energy products and services, as well as identifiable brands and unique technologies for automotive, materials handling and stationary power applications. Directly maintaining and operating two manufacturing centres in Australia and employing some 500 people, Century Yuasa continues the leading Australian manufacturer of stored energy products.
