Century SHARP

High Efficiency Traction Chargers Century SHARP 36V 105A CG5318

SHARP chargers are a budget range of chargers offered by Century which incorporate specialised charging algorithms suitable for all lead acid batteries in traction applications. With high efficiency power conversion technology and wide input voltage range, these chargers are ideally suited for Australian conditions.

Designed to recharge valve regulated (sealed) and vented (flooded) lead acid batteries in a variety of Ah capacities. Integrated with an industrial microprocessor using Century's specified algorithms, these changes have the benefit of delivering a fully charged battery quicker while minimising the effects that some standard chargers can have.

The use of high frequency power conversion can reduce the amount of input energy consumed for charging, with a high level of control of the power applied to the battery.

Using advanced technology means that the chargers are lighter weight to conventional thyristor controlled chargers; giving operators the choice of wall mounting these chargers to prevent the risk of damage from impact from other equipment as well as increasing floor space utilisation.

Features and Benefits

- Compliant to relevant Australian Standards: Century ensures full compliance with all relevant standards applicable to traction chargers.
- Industry leading charging algorithms: Century specified charging algorithms improve charging time and reduce physical wear on the battery, such as increase water consumption.
- Alarm indicators: Charger indicates to the operator issues with the charging condition.
- High frequency power conversion: With >90% efficiency power conversion from input power to output power, reduces the amount of power consumed to recharge batteries relative to SCR technologies.

Century SHARP 36V 105A CG5318

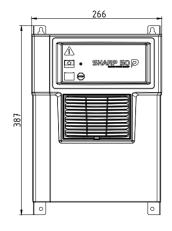

ELECTRICAL INPUT SPECIFICATIONS		
VAC Input	3P 400Vac ±10%	
Input Current (Max I)	7.6A (@400VAC)	
Input Frequency	47-63Hz	
Power Socket Required	56C420	
Power Factor	0.95 at rated power	
Efficiency	91.5% at rated power	

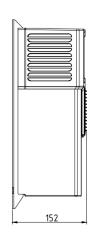

echnology	High Frequency Conversion(Soft Start)
ominal VDC (Programmable)	36VDC (24VDC)
OC Output Range	1.2 to 2.8VDC per cell
utput Power (kW)	4.3kW (2.4VPC @400VAC)
ax Output Current (A)	105A
put Ripple	<5% RMS of Nominal DC Voltage &
	<10% RMS ripple current at 100% load
tput Accuracy Setting	VDC output ±0.5% / Current output ±2%

ENVIRONMENTAL SPECIFICATIONS	
Environmental Protection	Conformal coating
Operational Temperature (Ambient)	0 - 40 °C
Storage Temperature	-25 - 60 °C
Humidity	RH <95% Non-condensing
Cooling	Fan cooled
IP Rating	IP20

STANDARDS		
Emissions	EN61000-6-3	
Immunity	EN61000-6-2	
Safety	EN60335-1 & EN60335-2-29	

MECHANICAL	
Weight (kgs)	8
Height (mm)	387
Width (mm)	266
Depth (mm)	152

An affiliated business of the GS Yuasa Corporation, Century Yuasa has over 80-years of supplying a range of stored energy solutions to the Australian market. An established network of sales and distribution offices throughout Australia and New Zealand has seen the business gain the trust and respect from its customers by focusing on quality products and exceptional customer service. The portfolio within Century Yuasa includes a wide range of stored energy products and services, as well as identifiable brands and unique technologies for automotive, materials handling and stationary power applications. Directly maintaining and operating two manufacturing centres in Australia and employing some 500 people, Century Yuasa continues the leading Australian manufacturer of stored energy products.
